

The deer

Sometimes a deer show up, come get a look at you then runs away !

By design, the deer will not always show up, some conditions exist. However, it's more fun if they aren't disclosed to the general public.

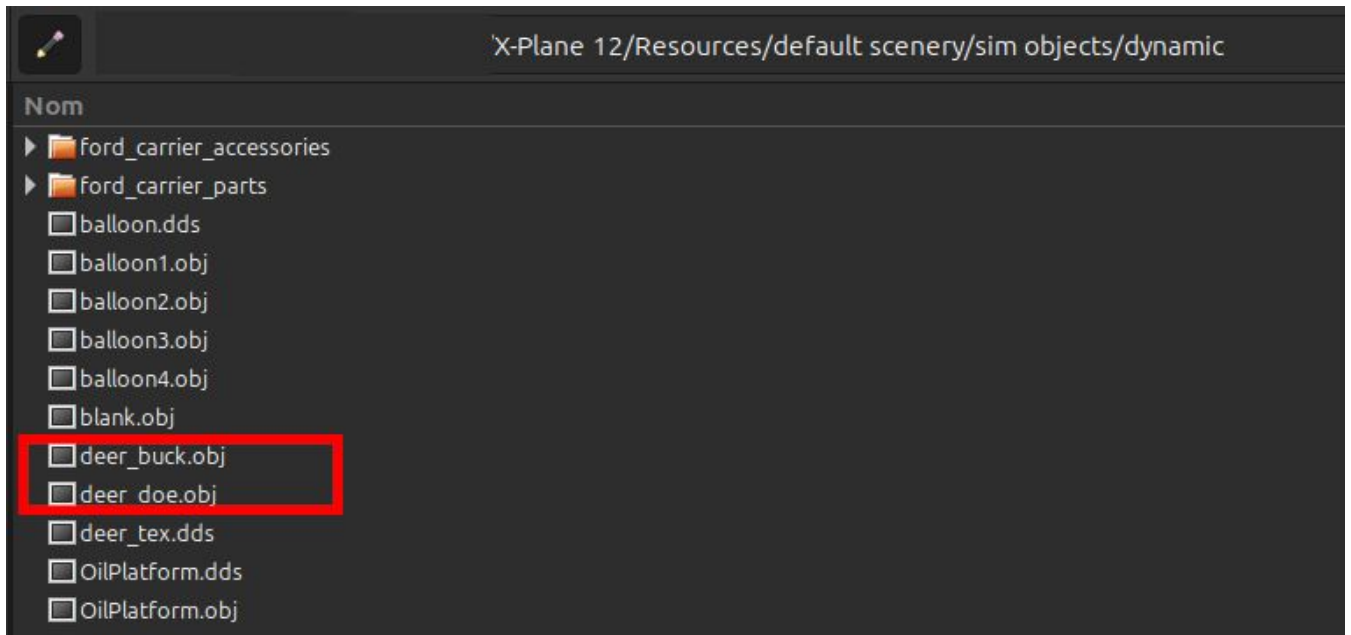

However, you need to make a simple file modification on your own computer to have the animal actually moving and jumping.

To animate the deer body and legs, you need to amend a file distributed by Laminar Research. As the animal is indeed not my object, I cannot share the modification. I'll have to let you do it yourself.

First step

please open the folder X-Plane 12/Resources/default scenery/sim objects/dynamic

Second step

Open in a text editor the file **deer_buck.obj**.

Also open **deer_doe.obj**

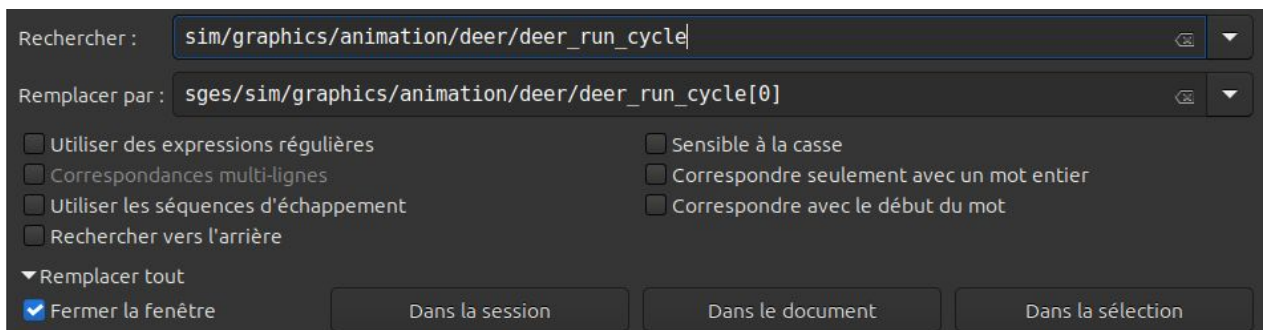

Third step

Replace all occurrences (between 14 and 18 occurrences) of the string :

sim/graphics/animation/deer/deer_run_cycle

by :

sges/sim/graphics/animation/deer/deer_run_cycle[0]

Fourth step

Save and close both objects.
