Simple Ground Equipment & Services

Quick start

Simple Ground Equipment & Services displays or hides static objects around your aircraft on the ground. Among other things, SGES can control the X-Plane 12 aircraft carrier and frigate, place them anywhere in the world, display an active runway barrier, display a car accident site, pop up a ship accident site in the vicinity, and so on. Crafted in X-Plane 12 with retro-compatibility to some extend to X-Plane 11.55.

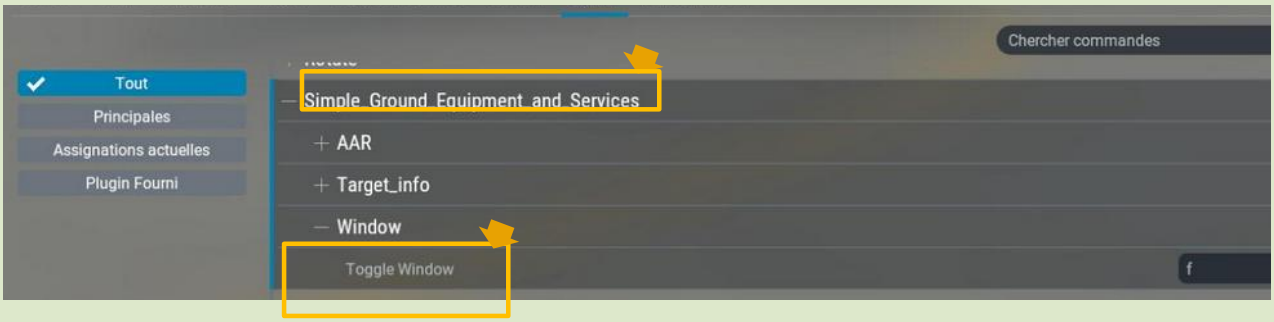

Installation

1) Install FlyWithLua NG for X-Plane 11 or FlyWithLua NG+ for X-Plane 12

2) Drop all files and folders into : X-Plane [*11*/*12*]/Resources/plugins/FlyWithLua/

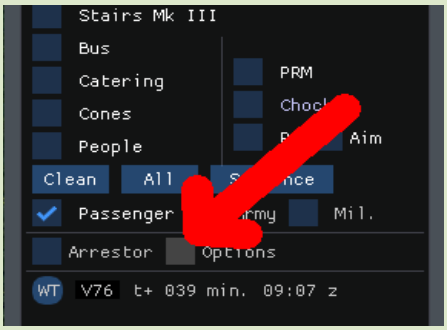

Skunkcrafts_updater.cfg goes to plugins/FlyWithLua/ but the script and the subfolders all go to plugins/FlyWithLua/Scripts/

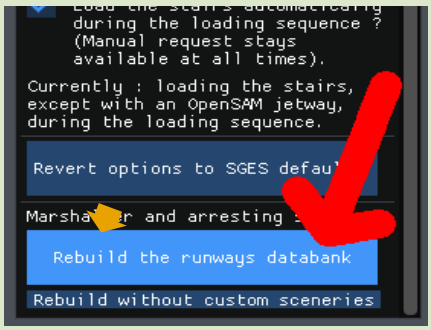

3) Open the keyboard menu in X-Plane and attribute a key to toggle our menu

4) Build a databank of all parking positions and runways for the marshaller and the arresting system:

Open the SGES menu. → Select "Options" → Click on "*Rebuild the runways databank*"

Wait a few minutes while we scan all default and custom sceneries.

Details of the installation

skunkcrafts_updater.cfg goes to:

X-Plane 12/Resources/plugins/FlyWithLua

The script and other subfolders all go to:

X-Plane 12/Resources/plugins/FlyWithLua/Scripts

Summary of the installation

The resulting installation shall respect the following architecture:

plugins/FlyWithLua/skunkcrafts_updater.cfg

plugins/FlyWithLua/skunkcrafts_updater_beta.cfg

plugins/FlyWithLua/Custom_Fonts/Roboto-Regular.ttf

plugins/FlyWithLua/Scripts/Simple_Ground_Equipment_and_Services.lua

plugins/FlyWithLua/Scripts/Simple_Ground_Equipment_and_Services

plugins/FlyWithLua/Scripts/Simple_Ground_Equipment_and_Services_expanded_documentation

(…)

plugins/FlyWithLua/Scripts/Simple_Ground_Equipment_and_Services/aircraft_optional_profiles/SGES_USER_CONFIG.lua

(…)

What if the text in the SGES in-game menu isn't great ?

Roboto-Regular.ttf is not mandatory. You can install it if the default font in your FlyWithLua version after August 2026 isn't great looking (blurry text). It does actually reinstall the legacy font that was always used before (which is not Roboto, but the file name has to stay like that). I have stored this file here:

Scripts/Simple_Ground_Equipment_and_Services_expanded_documentation/Roboto-Regular.ttf

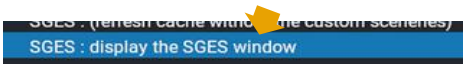

The file called Roboto-Regular.ttf1 (inside the documentation folder) font goes into:

X-Plane 12/Resources/plugins/FlyWithLua/Custom Fonts/Roboto-Regular.ttf

Then go in-game in the SGES menu, browse to the options segment and select "Restore the legacy font".

Accessing the SGES menu in game

Press your keyboard key, set during the installation process, to open the ground services menu. You can also popup our control panel from the FlyWithLua menu.

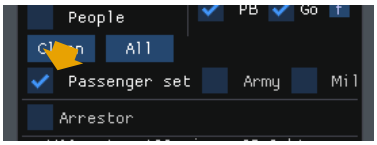

The menu is dynamic, it does not look always the same depending on the aircraft and situation loaded. For instance, the services available vary from aircraft to aircraft.

The ramp equipment

When the menu is open, tick the boxes as required to select individually a service.

- To avoid interfering with any aircraft systems, **those ground services are purely visual**. There is no active interaction with the sim, except for the deicing service (your aircraft will be actually protected from ice) and chocks.
- **Ground services** are displayed in the vicinity of the fuselage, but **not necessarily in contact to it**. The idea it to bring some life to the apron but to keep it simple.

Passenger / Army / Military set: alternative set of vehicles for passenger apron operations, cargo operations, military operations. ''Army'' does only appear when external assets are configured (see the manual).

Bush mode: alternative set of vehicles suited for field operations. This options appears in the menu only with small planes in X-Plane 12.

Chocks: active chocks that actually retain your aircraft (as demonstrated in the picture above), allowing you to release the parking brake as required.

Follow-me: you can **select the follow-me** in the menu only when your taxi speed is below 30 kts.

The follow me car is not intelligent. It will turn when you steer your own aircraft nose wheel, so you're actually just pretending following him.

Options: many customizations are allowed in the in-game Options.
